

HTML: links

Unit 2 – Lesson 3

How to add links

```
<a href="http://www.istitutopilati.it">Click here</a>
```

How to add links

```
<a href="http://www.istitutopilati.it">Click here</a>
```

Tag name

a stands for anchor

How to add links

```
<a href="http://www.istitutopilati.it">Click here</a>
```

Attribute

href stands for hyper reference

How to add links

```
<a href="http://www.istitutopilati.it">Click here</a>
```

URL of the link

you need to start from the protocol(http)

How to add links

```
<a href="http://www.istitutopilati.it">Click here</a>
```

Clickable writing

It is blue and underlined

Work in pairs

- Look at the following links: do you recognise any mistake? Correct them

```
<a href="www.google.it">
```

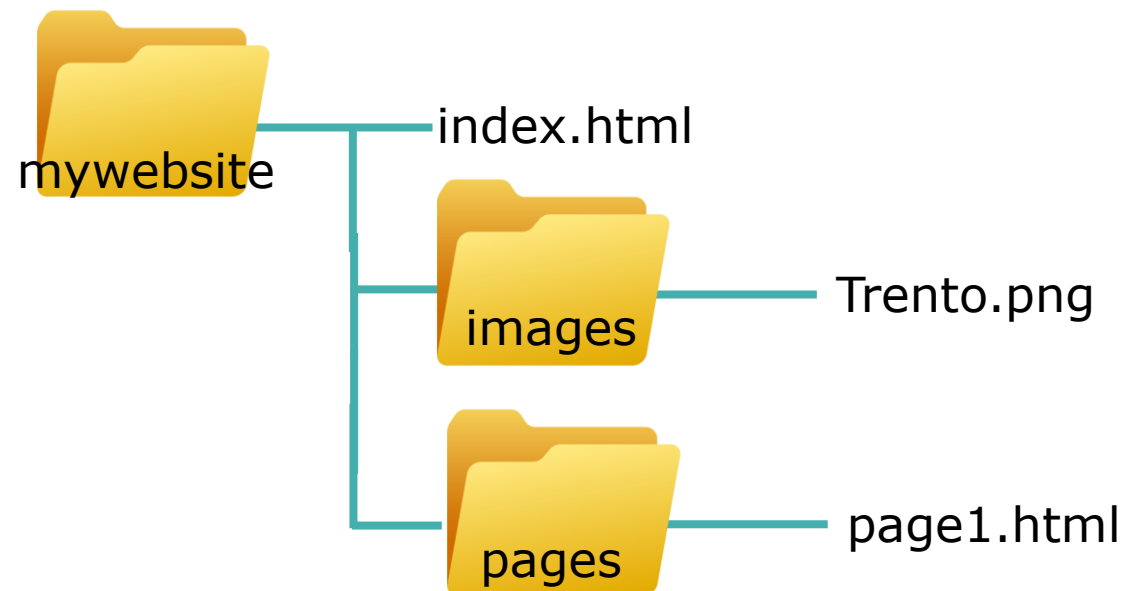

```
<a href="www.google.it">Click me</a>
```

```
<a>http://www.google.it</a>
```

Focus on the value of the attribute href

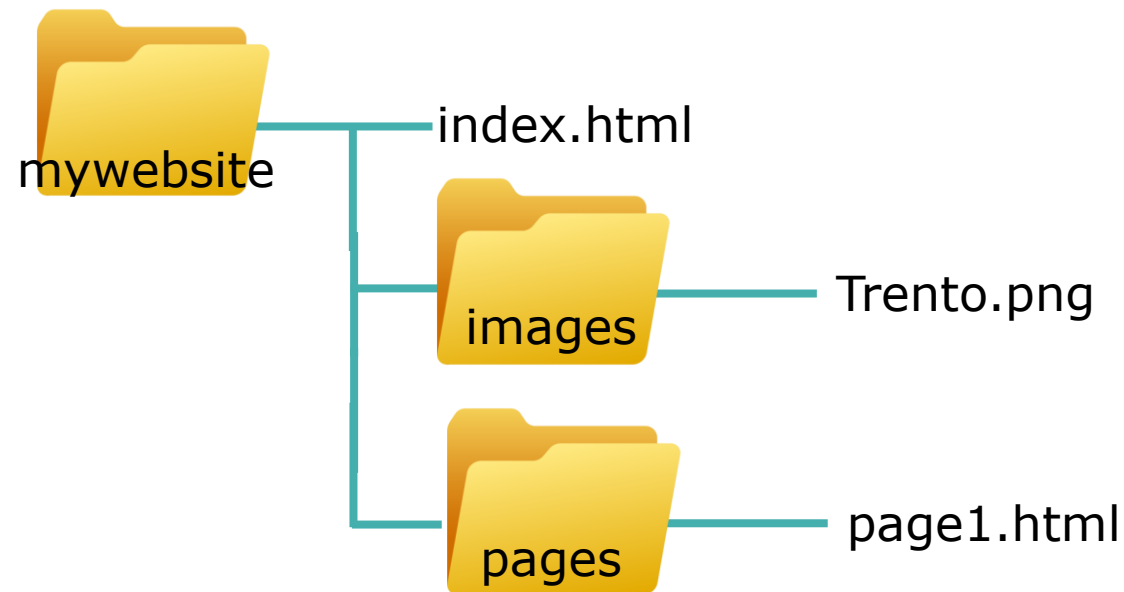

- It could contain a URL from the web
- It could also contain another html page

Focus on the folders structure

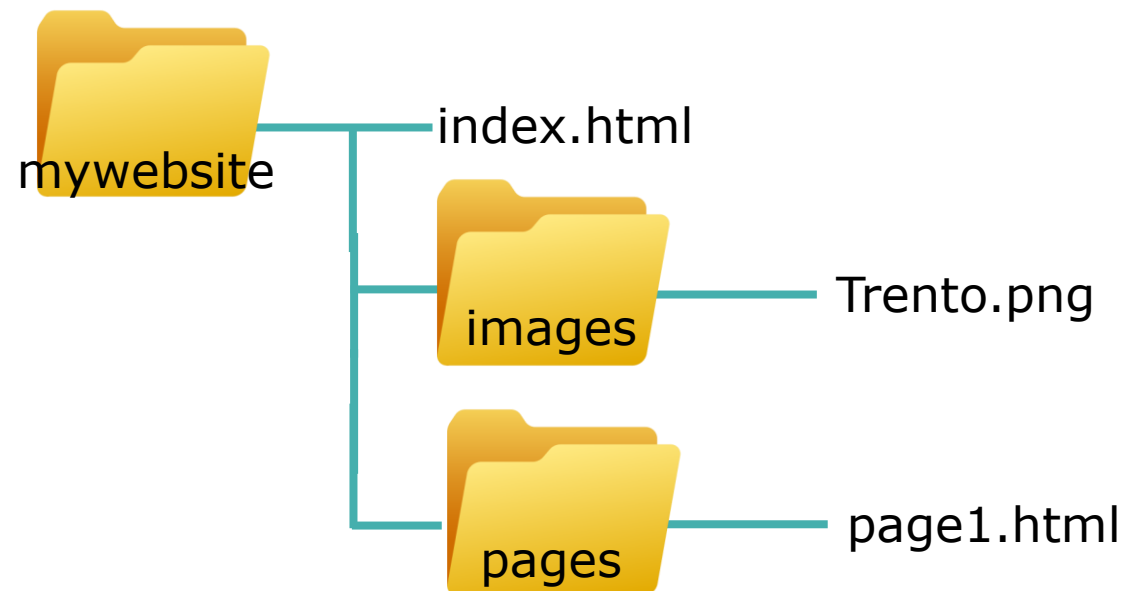

- Consider to add a link in your `index.html`, to the page `page1.html`: what is the value for the `href`?

Focus on the folders structure

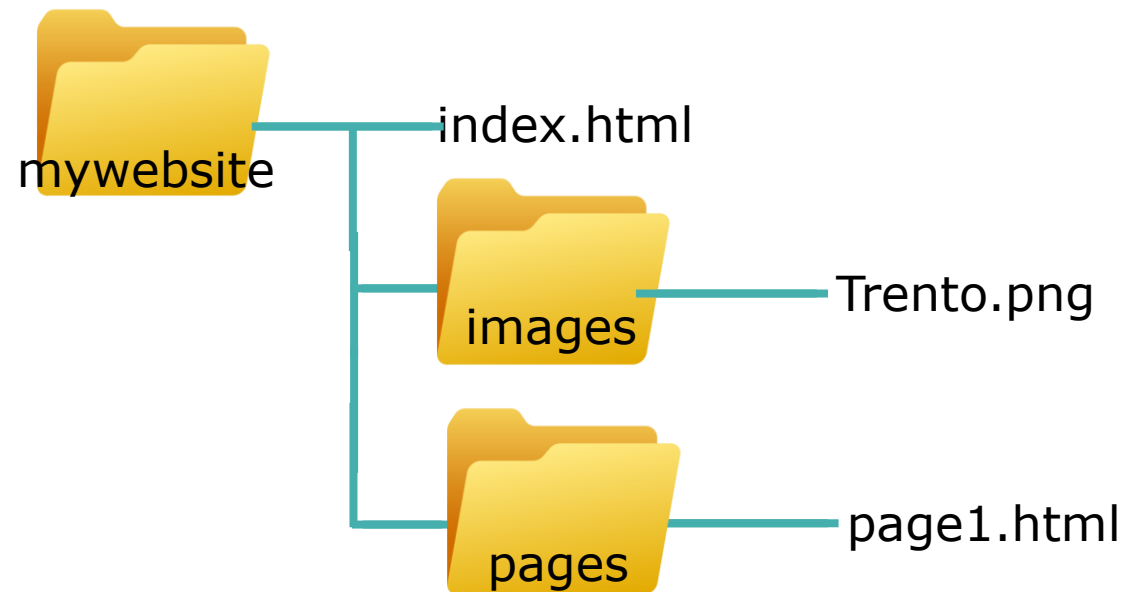

`Click here`

Focus on the folders structure

- Consider to add the image Trento.png in your page1.html: what is the value for the src?

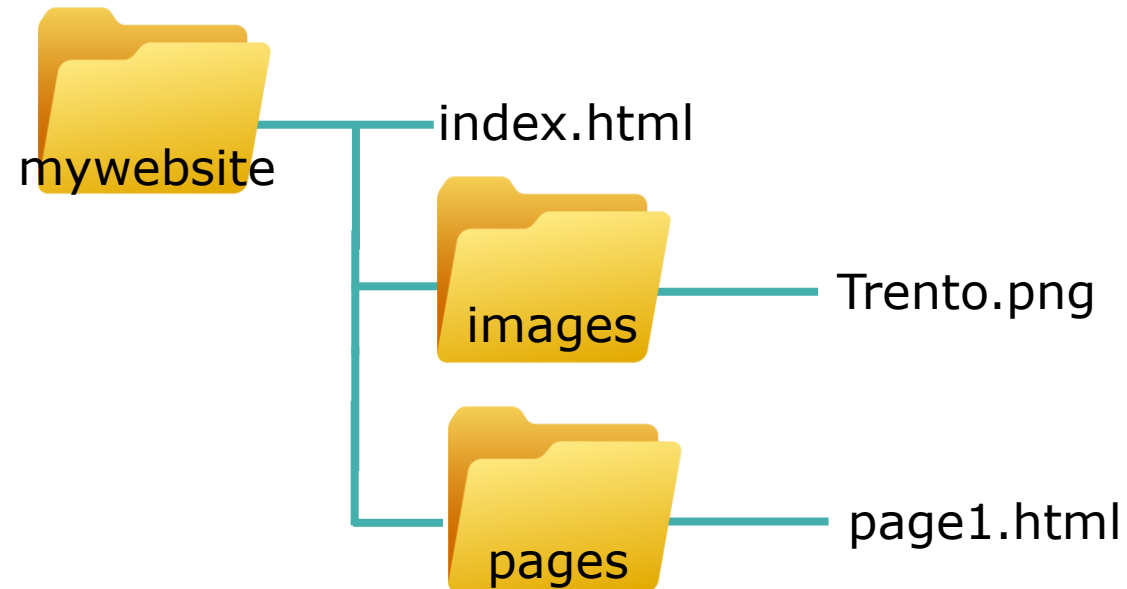

Focus on the folders structure

```
<img src="../../images/Trento.png>
```

Work in pairs

- Consider the following structure:

- Write the element to link the image:
 1. From the index.html
 2. From the page1.html

- Write the element to link the page index.html from page1.html

- Write the element to link the Google website
