

LIME/BGY
ORIO AL SERIO

5 OCT 07 10-1P

BERGAMO, ITALY
AIRPORT BRIEFING**1. GENERAL****1.1. ATIS**

ATIS 112.6

1.2. NOISE ABATEMENT PROCEDURES**1.2.1. RWY USAGE**

For a proper RWY assignment all pilots must declare the ICAO certification of their ACFT.

ACFT licensed according to ICAO Annex 16, Volume I, Chapter 2 shall not use Bergamo APT, except flights in emergency.

Such flights are allowed to take-off from RWY 10 only.

Use of RWY 28 will be authorized in case of adverse weather conditions or safety reasons.

1.2.2. RUN-UP TESTS

Between 1400-1600LT and 2300-0600LT engine tests are forbidden except for authorized ACFT to be used immediately, provided general safety is assured.

Exceptions may be granted by local Civil Aviation Authority in exceptional circumstances, provided that APT noise limitation is assured.

1.2.3. AUXILIARY POWER UNITS (APUs)

Use of APU is allowed 5 minutes before EOBT but only to start-up engines, in case of extraordinary reasons, APU can be limited to the shortest time. If ground generator units are not available, APU can be started up to 30 minutes before EOBT and switched off 20 minutes after arrival.

1.2.4. REVERSE THRUST

The use of reverse thrust at power higher than idle is allowed only in the event of proven safety/operational reasons.

1.3. LOW VISIBILITY PROCEDURES**1.3.1. GENERAL**

LVP will be applied during CAT II/III and Take-off operations with RVR less than 550m.

Pilots will be informed when Low Visibility Operations (LVO) are in force by ATIS broadcast or by radiotelephony.

Minimums used by operators must be accepted by appropriate CAA.

RVR and CEILING

- Predisposition: RVR equals 800m and/or CEILING equals 200 ';
- Activation: RVR TDZ equals 550m and/or CEILING is less than 200 ';
- Disactivation: RVR TDZ equals 600m and/or CEILING is 200 ' or more.

LVP will be deleted when all RVR greater than 800m or CEILING is 200 ' or more. During activation phase, TWYs D & E are not available.

Arriving ACFT

Landing ACFT will vacate the RWY 28 by using only TWY F when proceeding to the MAIN APRON or TWY G when proceeding to the NORTH APRON.

Pilots will assess to TWR 'RWY vacated' when the ACFT has passed the last TWY alternate yellow and green centerline lights and the signs of 'RWY vacated'. These lights and signs are to be considered the border of the ILS sensitive area.

Surface movement Radar (SMR) is available to monitor pilot 'RWY vacated' reports.

Departing ACFT

On manoeuvring area taxiing is restricted to TWYs equipped with centerline lights.

On receiving taxi clearance ACFT must only proceed when a green centerline path is illuminated. In the event of failure of the lights or stopbars, ACFT will only taxi with FOLLOW-ME and on TWR instruction.

ATC will require departing ACFT to use CAT II/III holding position T for RWY 28.

LIME/BGY
ORIO AL SERIO

5 OCT 07

10-1P1

BERGAMO, ITALY
AIRPORT BRIEFING**1. GENERAL**

Pilots shall never cross a stopbar and NO ENTRY red bar with red lights on.
With RVR less than 400m take-off run must be started on THR 28.

When LVP are in force, due to increased spacing between arriving ACFT, a reduced landing rate can be expected.

Training ILS CAT II/III must be requested to ATC unit in advance.

Restrictions on taxiing as follow:

- RVR less than 400m to 200m: FOLLOW-ME assistance on request.
- RVR less than 200m: FOLLOW-ME assistance is mandatory.
- RVR less than 400m: LVO are allowed when pilots report to TWR 'being standstill at holding point T'.

With surface movement radar (SMR) not available:

When RVR value at TDZ is less than 550m the movement of ACFT over the entire movement area shall be the follow:

- When landed ACFT has reported to be at the stand, another ACFT may be cleared to taxi.

With RVR value less than 400m, an ACFT may be cleared to land or take-off when another ACFT has already reported to TWR being at the holding point T.

Contingency take-off RWY 10:

When RWY 10/28 is contaminated by snow or ice and friction coefficient value suggest take-off for RWY 10, RWY 10 take-off is allowed previous ATC coordination. Departing ACFT shall start take-off run for RWY 10 from THR 10 or on pilot request from start point G.

Holding position F for RWY 10 is available by TWR.

If an ACFT should report to be lost on manoeuvring area during LVP and if ATC should not be able to determine its position then:

- all OPS must be immediately suspended.
- Taxiing traffic shall be instructed to report and maintain its position and shall be informed about last position reported/known of the lost traffic.
- ATC will instruct a FOLLOW-ME for the search of the lost traffic on the manoeuvring area.

Contingency communication failure during LVP:

Whenever an ACFT operating in the manoeuvring area experiences a communication failure it shall comply with the following:

- Departing ACFT will continue strictly on the assigned taxi route to the clearance limit. ACFT shall remain on this point and wait for the arrival of the FOLLOW-ME in order to be guided back to the stand.
- Arriving ACFT will vacate the sensitive area via the appropriate TWY and wait for the arrival of FOLLOW-ME in order to be guided to the stand.

Procedure in case of emergency and/or accident

When emergency or an accident occurs, all taxiing traffic in the manoeuvring area shall be instructed by the TWR to report and maintain position.

LIME/BGY
ORIO AL SERIO25 MAY 07 JEPPESEN
10-1P2BERGAMO, ITALY
AIRPORT BRIEFING**1. GENERAL****1.4. TAXI PROCEDURES**

TWY A can only be used to enter the RWY. While take-off, landing or LVP operations for RWY 10 are being performed the presence of any ACFT is forbidden. During approaches for RWY 28 the presence of ACFT with wingspan 118'/36m or more is forbidden, two ACFT with wingspan less than 118'/36m are allowed along TWY A or at the holding point A if visibility is equal to or greater 1500m and/or ceiling 500' or greater. Only one ACFT with wingspan less than 118'/36m is allowed when visibility is less than 1500m and/or ceiling is less than 500', but within CAT I conditions.

TWY G: For ACFT with wingspan less than 118'/36m, available at DAY from RWY HEAD 10 with minimum VIS of 1500m.

1.5. PARKING INFORMATION

Use of stands 2 and 8 with FOLLOW-ME only.

Stand 52 entrance must be executed with FOLLOW-ME.

1.6. OTHER INFORMATION

RWY 10 and 30 right hand circuit.

LIME/BGY
ORIO AL SERIO25 MAY 07 JEPPESEN
10-1P3BERGAMO, ITALY
AIRPORT BRIEFING**2. ARRIVAL****2.1. SPEED RESTRICTIONS**

Unless otherwise instructed by ATC arriving ACFT should reduce speed to:

- 250 KT at or below FL 100.
- 210 KT when starting turn to intercept ILS LOC or appropriate VOR radial or when on STRAIGHT-IN APPROACH at 12NM from THR.
- 180 KT when completing turn to intercept ILS LOC or when on STRAIGHT-IN APPROACH at 9NM from THR.
- 160 KT at 5NM from THR.

2.2. NOISE ABATEMENT PROCEDURES

ACFT performing visual APCH are required to be established on ILS RWY 28 before ORI NDB or BRM 5.3 DME

2.3. CAT II/III OPERATIONS

RWY 28 approved for CAT II/III operations, special aircrew and ACFT certification required.

2.4. TAXI PROCEDURES

RWY 10/28:

Exit from RWY via TWY B allowed to ACFT coming from THR RWY 10.
Exit from RWY via TWY B allowed to ACFT coming from THR RWY 28 at DAY with minimum VIS of 1500m.

Exit from RWY via TWY D allowed only to ACFT coming from THR RWY 10.
Exit from RWY via TWY E allowed only to ACFT coming from THR RWY 28.

RWY 12/30:

Exit from RWY via TWY M only.

LIME/BGY
ORIO AL SERIO5 OCT 07 JEPPESEN
10-1P4BERGAMO, ITALY
AIRPORT BRIEFING**3. DEPARTURE****3.1. START-UP PROCEDURE**

On the main apron only, crew shall receive the signal ALL CLEAR from ground staff before requesting start-up engines to the tower.

3.2. TAXI PROCEDURES

RWY 10/28:

Entering into the RWY via TWY B allowed DAY with minimum VIS of 1500m.
TWY D entering into the RWY allowed DAY with minimum VIS of 1500m and with direction THR RWY 10.

TWY E entering into the RWY allowed DAY with minimum VIS of 1500m and with direction THR RWY 28.

RWY 12/30:

Enter the RWY via TWY N only.

3.3. NOISE ABATEMENT PROCEDURES**3.3.1. GENERAL**

Between 2300-0600LT take-off shall be performed from RWY 10 except for:

- weather conditions recommend the use of RWY 28;
- Low Visibility Procedures;
- safety reasons or air-transport-service exceptional reasons;
- diverting ACFT.

Other reasons cannot be accepted.

During the initial climb phase, pilots shall maintain the following parameters:

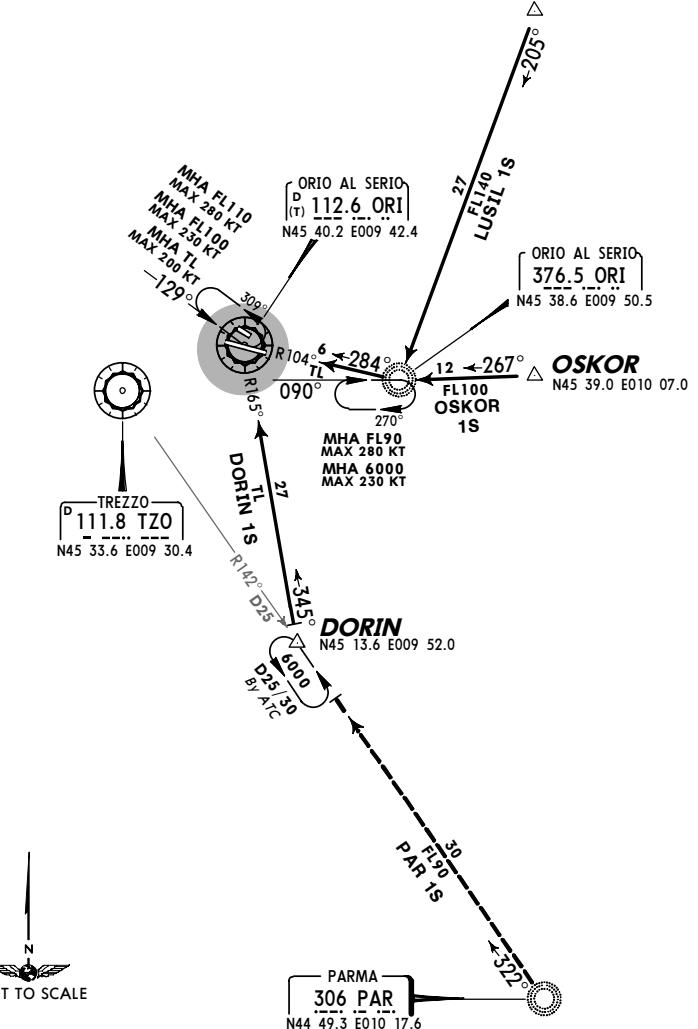

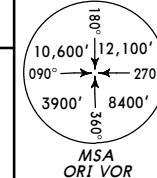

- a) up to 1500' QFE
 - take-off power;
 - take-off flap;
 - climb at $V_2 + 10/20$ KT or as limited by body angle;
 - reduce thrust and climb at $V_2 + 10/20$ KT until reaching 3000' QFE
- b) at 1500' QFE
 - accelerate smoothly to enroute climb speed with flap retraction.
- c) at 3000' QFE
 - accelerate smoothly to enroute climb speed with flap retraction.

Detailed description of the landing table:
 - The table provides landing data for categories A, B, C, and D based on ILS and LOC gradients.
 - Category A: ILS 970' (216'), LOC 1260' (506').
 - Category B: ILS 982' (228'), LOC 1260' (506').
 - Category C: ILS 990' (236'), LOC 1260' (506').
 - Category D: ILS 1001' (247'), LOC 1260' (506').
 - Columns include RVR values (1000m, 1500m, 2000m, 2500m) and Max Kts (100, 135, 180, 205).
